# TOR- Tool for Online Review

© portamis 2012

## TOR Features

Upload InDesign documents as TOR documents so that they can be edited online.

Clients and individual users can see and edit each of their online TOR documents via the TOR-Online-Editor.

With the TOR-Management Console for the Manager InDesign documents will be processed and uploaded centrally.

The TOR-Customer or reviewer only works with the TOR-Online-Editor.

## TOR for the advertising agency

TOR is getting more interesting for the advertising graphics.

TOR can already be used for many types of layout.

The customer can change his brochure himself

- Text changes
- Image sizes
- Moving frame positioning
- line breaks

With each new version, the TOR Online Editor will support more InDesign features.

## Secure Document Exchange

The safest way to exchange a document is not to exchange it.

The InDesign document remains at a central place to reduce the email-traffic.

No more mistakes.

No more cut and paste errors.

## Coupling with other systems:

TOR and Global Review of Kaleidoscope:

Complete Enterprise User and Translation management including various review features.

TOR and Content Management Systems:

With TOR and the software portamis Layoutomizer, generated documents can be imported into the Online Review from any authoring systems, fully automated.

## TOR for translators and reviewers

Automatic text export from InDesign directly into the translation memory system.

Online Review of the translation in the layout.

Return of the translation material into InDesign.

Coupling is possible with workflow-oriented Systems.
